

7 Tips To Making Sense Of Solar

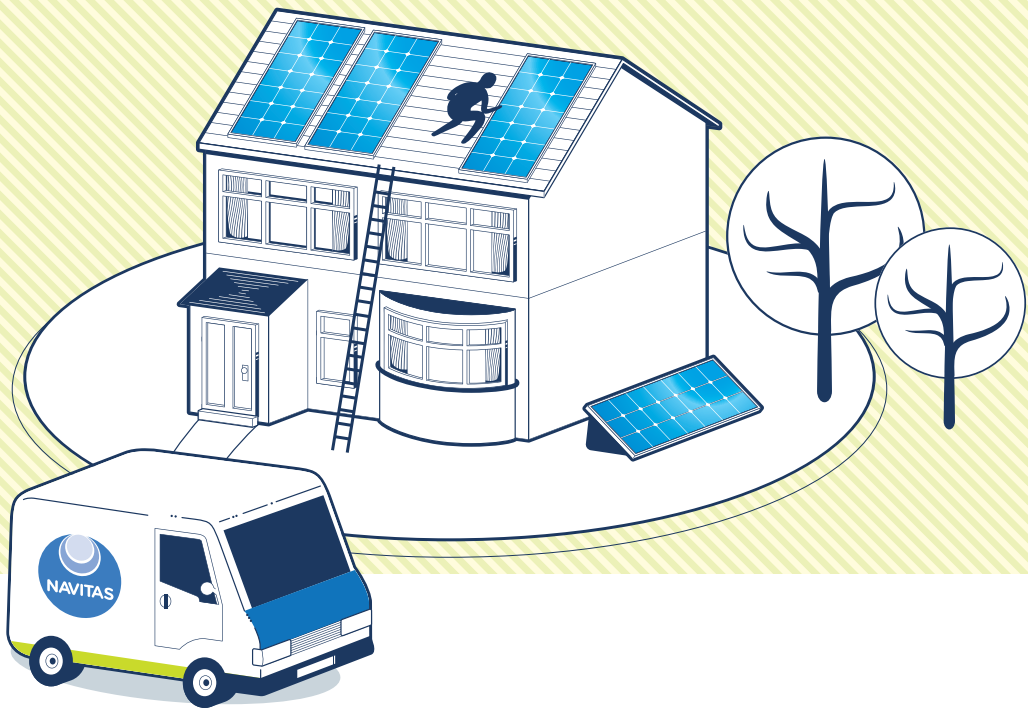

Why is it getting so popular?

You're not alone by asking 'why are more people fitting solar?', every day we are seeing more and more solar systems going on roofs

Solar clearly is the latest trend in renewable energy, lets break it down into seven easy steps to explain.

... lets go!

1 Solar is at its lowest price point

Throughout the world, the demand for Solar PV continues to grow at a significant rate as we tackle the global challenge of reducing our carbon footprint.

This has pushed manufacturers to increase production output to levels which have dramatically reduced the cost of panels to an all-time low.

There has never been a better time to invest in solar.

2 Solar futureproofs your home

The traditional way of using electricity relies heavily on fossil fuels like coal or gas; both of these are bad for carbon production but are also in limited supply.

This makes our traditional ways more expensive and vulnerable to price increases.

We rely so much on electricity in everything we do; more people than ever before are now working from home and many of us are now even using it to power our cars; our dependence on electricity is ever growing and Solar provides an option to help us futureproof our homes from this as the energy you receive from them is free with no damage to our planet.

Optional battery storage systems can provide further benefits by giving you control over how you use your energy. They can charge from your Solar or from the grid using a cheap tariff, ready to provide you with energy just when you need it, so there's no waste.

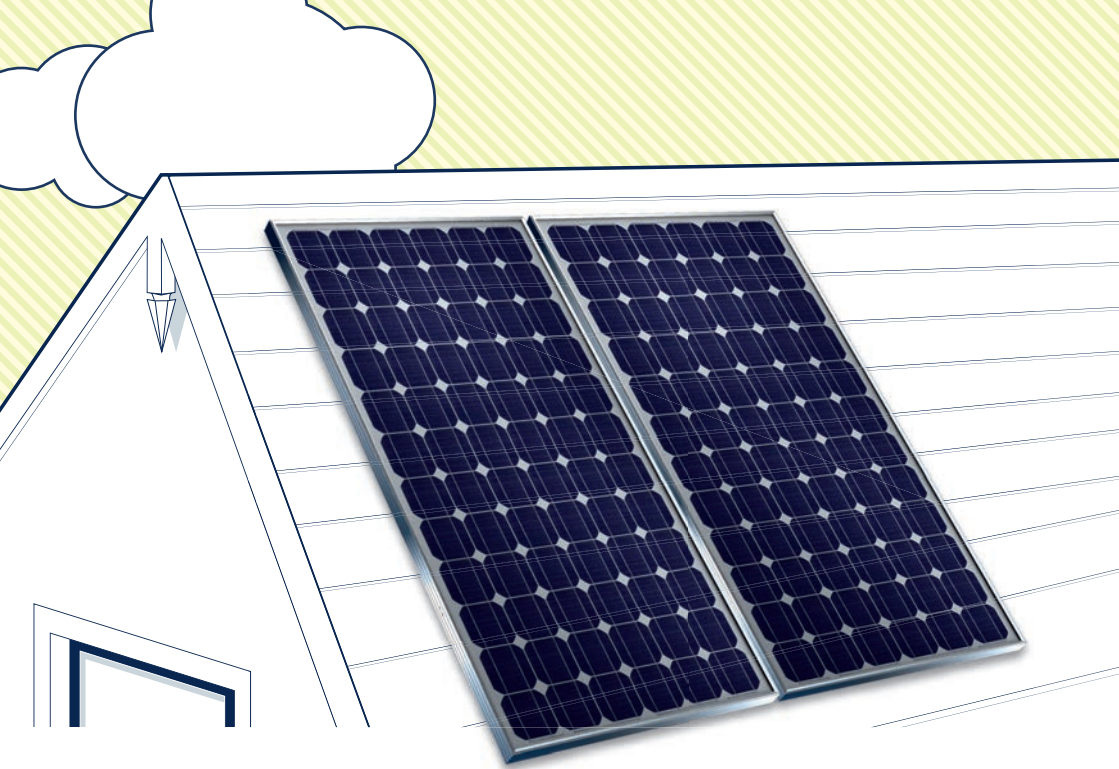

3 Solar provides a great return of investment

When you put your money in the bank, you get a low return on your investment.

A typical ISA savings account will offer rates of up to 3% meaning that many will often find themselves below the rate of inflation, so your savings are not keeping up with the cost of living.

However, if you invest in Solar panels, the return of investment can be much higher, with yields often in excess of 10% or more.

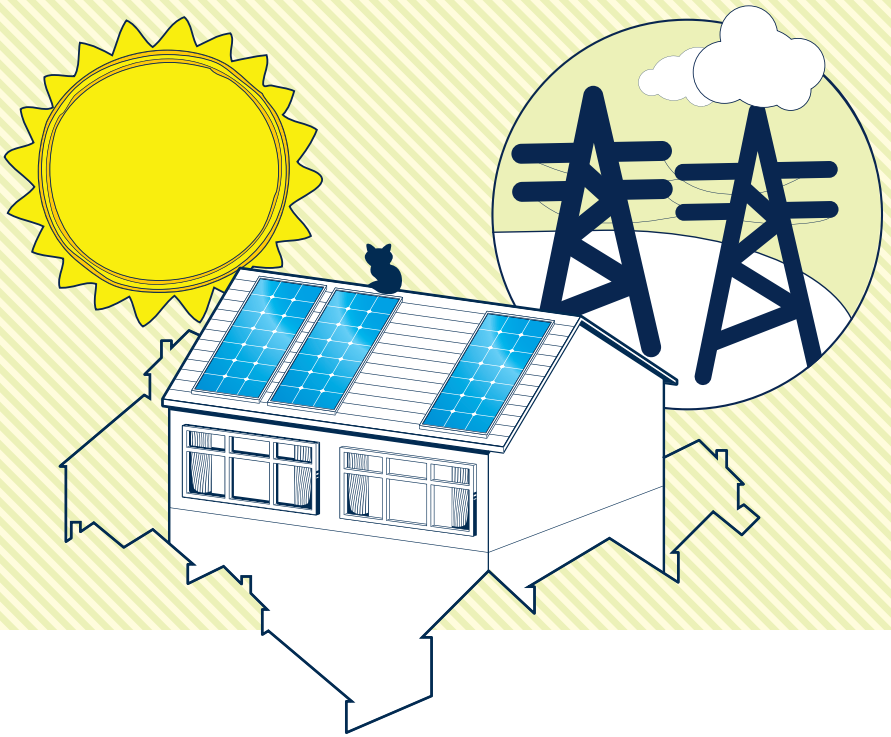

4 Solar can add value to your property

With the public becoming more conscious of the environment and global warming, energy efficiency is now a key factor for property buyers.

In a recent study, energy efficiency came third for the most important reasons to purchase new property.

Solar Panels will likely have a positive impact on future house prices and with all our panel manufacturer's offering 25-year performance warranties, this is real added value to your property.

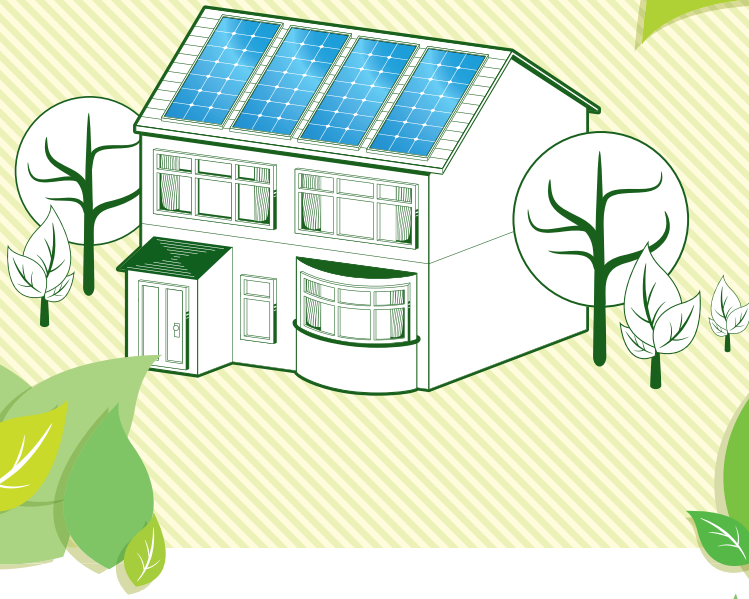

5 Sun light is a free source of energy

Every day the sun gives us more energy than we could ever use.

it can't be bought or traded; nobody can control its power there will never be a monopoly that will control the free energy it gives you.

During the day you can enjoy independence from energy price increases, the sun can never charge you more only give you security everyday.

6

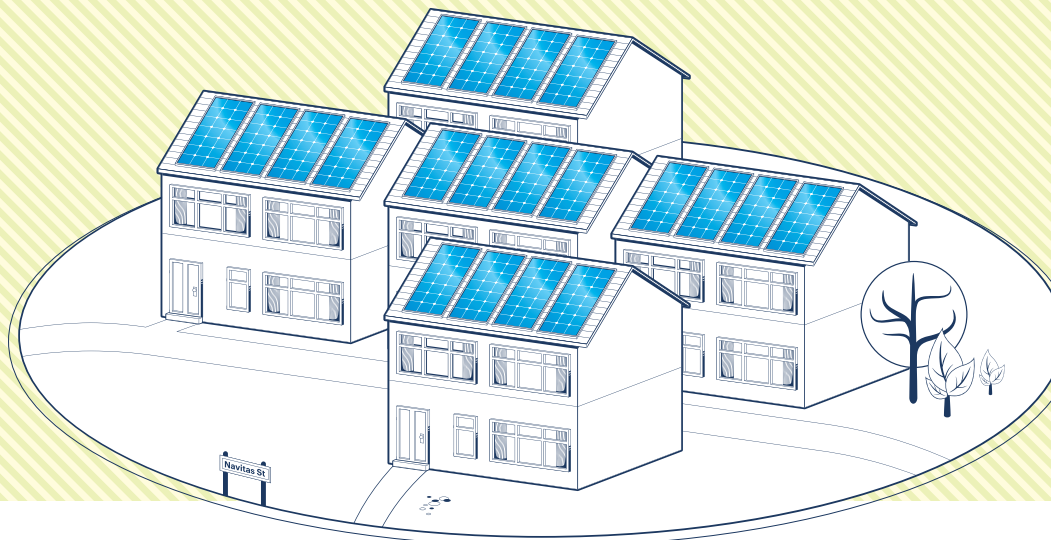

Solar Power Is Good for the Environment

The electricity that is produced from the panels is purely from daylight, there is no better way to produce clean and green energy.

Solar power is an excellent way to reduce your homes carbon footprint, once installed it has no detrimental effects on our planet.

It won't produce any harmful greenhouse gases keeping it safe and environmentally friendly.

Solar is self-sufficient and will enhance a sustainable future, installing Solar on your home shows how you care for the environment.

7 Solar is virtually maintenance free

Once the system is set up, you shouldn't need to pay extra costs for maintenance packages.

The panels are designed to be self-cleaning and work efficiently without routine service, all the dust and debris is washed off during the rain which is usually enough to keep your panels clean enough to carry on giving you free electricity.

The panels have no moving parts to wear out and Navitas use only manufacturers that provide a minimum 25-year performance warranty giving you long term peace of mind, so it's great for you and good for us too.

We've been fitting solar panels since 2009, so we have a great deal of experience; if you have any questions or just want some advice, we're always happy to help you Make Sense of Solar.
